REVETMENT MATTRESS

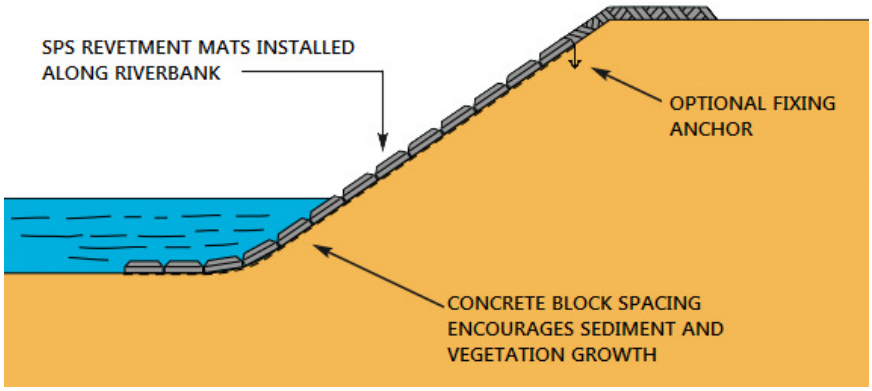

River, Road, Embankments

REVETMENT MATTRESS

The SPS revetment mattress is a flexible, interlocking matrix of concrete blocks linked together to combine as one. The revetment mattress combines the aspects of lightweight blankets and mesh, such as porosity, flexibility, vegetation encouragement and habitat enhancement. The SPS revetment mattress is aesthetic and a functional alternative to rip-rap, poured concrete and other heavy duty erosion control systems.

The SPS revetment mat is easy to install, and therefore can dramatically reduce overall project costs. Installation anchors are available for varying slope angles/ soils in certain conditions.

The revetment mattress is manufactured to BS EN Standards from high strength concrete, with lifting loops for safe and easy handling. Specific lifting equipment is available for hire.

Great Yarmouth and Dundee branches stock standard size units allowing for a fast turnaround from order to delivery.
